SUPERMARK®

A more sophisticated system...

Supermark is another great product from Selectamark, based on their chemical marking system used since 1985 to mark millions of items and deter theft.

Supermark 1

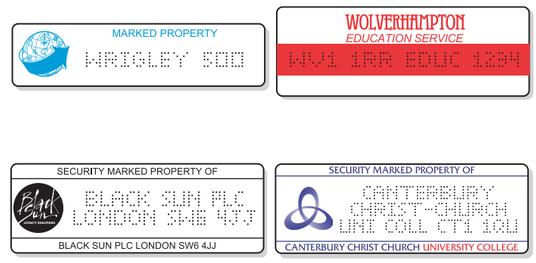
Security labels have 'Marked Property' printed on them in red and are punched with your customised message, postcode, company name, sequential numbering. Punched information is 7mm - 4mm in size dependent on how much information is required.

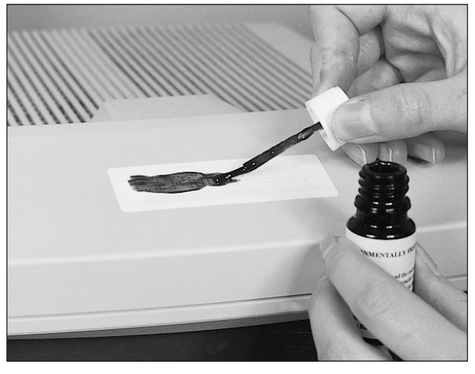
Supermark 2

Is a superior system where the printing on the label is personalised with company name and/or logo in corporate colours and can include a barcode, if required. Additionally it is punched with a customised message.
We supply a range of coloured marking compounds each containing a UV element for etching plastic surfaces or items coated in baked-paint or enamel. Minimum order 500 labels.

Supermark can also offer these additional benefits:

- **A tamper-resistant label**
- **Personalised printing in colour**
- **Company logos**
- **Printed barcodes for automatic identification**
- **Security marking**
- **Professional finish**



How does it work?


When you receive your stencils, you remove the backing paper, place the label in the required position, spread the marking compound over the punched holes, leave for a short time, then remove the protective overlay. Do not touch for three hours. You will be left with a smart, tamper-resistant label which has a permanent chemical etching underneath - a quick, simple, low cost deterrent.
